

Fire Blanket

Fire Blankets are usually made up of a Fire-retardant material and are usually folded and packaged in a quick-release contraption for easier storage.

The blanket is made with glass fibre preventing oxygen from seeping through the blanket. It can not only be used to put out a fire in the kitchen, but it can also be used to douse flames on clothing. The fire blanket is not just used to cover a small fire, it can also be used to cover a person for him to make his escape.

There are many ways the Fire Blanket can be used; the 2 standard ways would be to:

1. Cover the flame with the blanket - The Fire Blanket can only be used to cover a small fire, cutting off the oxygen source from the surroundings and the Fire.
2. Cover yourself with the blanket - Protect yourself against the fire

Do note that our Fire Blanket should only be used in the event of a small fire. It should NOT be used to combat spreading fires. In addition to its limited size, the Fire Blanket requires a user to be in close proximity to deploy the fire blanket. This makes it incredibly dangerous for it to be used against a large, spreading fire.

How to Use:

- Familiarise yourself with the blanket by holding it in a proper manner, it can be stored back in the box
- The handles should be held upwards with the blanket covering the bottom of your hand nearest to the fire

Care Tips:

- Do not store the blanket near the stove
- Instead, store the blanket near the kitchen entrance to allow for easier escape

Product Details:

Our Fire Blanket comes in 3 sizes, 4"x4", 4"x6", and 6"x6".

Specifications:

| Size | 4"x4" | 4"x6" | 6"x6" |
|------------------------|---------------------|-------------|-------------|
| Dimensions | 1.2m x 1.2m | 1.2m x 1.8m | 1.8m x 1.8m |
| Thickness | 0.25±0.03mm | | |
| Material | Fibreglass Material | | |
| Temperature Resistance | 550°C | | |

Approvals:

- Meets EN 1869:1997 Standard
